Software for data searches
COPLINK is built around two software modules: COPLINK Connect and COPLINK Detect. COPLINK Connect transcends technical obstacles and jurisdictional boundaries to warehouse data from any number of participating sources. The data is accessible via an easy-to-navigate, graphical screen display that any officer can use with just minutes of training. COPLINK Connect resides within the law enforcement agency’s secure intranet, protecting and enabling data transmission according to agency policy and discretion. COPLINK Detect performs searches to suggest highly relevant crime links. In effect, it converts the masses of information now at an officer’s fingertips into mission-critical knowledge.

Rugged mobile computer
Amrel’s “White” Rocky has been encapsulated with a white coating that reduces heat absorption from direct sunlight by nearly 30 percent. This rugged mobile computing system has a department’s badge design directly applied to its white casing. It has been certified to MIL-STD 810E, MIL-STD 461D and IP54 for ruggedization. With a Pentium III 500-MHz CPU, this is a tough and fast mobile computing system. The “White” Rocky also includes Amrel’s open-architecture design that allows for easy system upgrading, device integration and field servicing.

Reporting software
Impact Solutions Corporation’s Xpediter Patrol C/S is a single software application that provides collected data to every user. The user can immediately access all modules and enter case information. Its mandatory fields, spell check and supervisor-level data approval features ensure field reports are accurate and complete. The modular system has a 32-bit client/server and a multi-tier architecture.
